

COMPETITION MEANS BUSINESS

Dear Chairman Wheeler and the FCC,

I work in the broadband industry, and I am writing to urge you to support policies that encourage more broadband competition today and in the future. Broadband competition is the key to unleashing innovation and investment.

Competition means business. Customers large and small rely on competitive network providers for better service, innovation and affordability. From start-ups to nationwide retail chains, to schools and libraries, and hospitals and government buildings, customers depend on competition and choice.

According to the FCC's own business data services proceeding, the vast majority of business locations have only one option, and less than one percent have a choice of more than two. That's not really a choice at all, and the Commission must address this broken market.

A vote for business data services reform is a vote for competition and consumers. Promoting competition is the fastest way to speed the technology transitions and deployment of next generation broadband networks that are essential to growing our economy and creating jobs. I encourage the FCC to act to bring more affordable choices to business customers without delay.

Sincerely,

I work in the broadband industry, and I am writing to urge you to support policies that encourage more broadband competition today and in the future. Broadband competition is the key to unleashing innovation and investment.

Competition means business. Customers large and small rely on competitive network providers for better service, innovation and affordability. From start-ups to nationwide retail chains, to schools and libraries, and hospitals and government buildings, customers depend on competition and choice.

According to the FCC's own business data services proceeding, the vast majority of business locations have only one option, and only two percent of locations have a choice of more than two providers. That's not really a choice at all, and the Commission must address this broken market.

A vote for business data services reform is a vote for competition and consumers. Promoting competition is the fastest way to speed the technology transitions and deployment of next generation broadband networks that are essential to growing our economy and creating jobs. I encourage the FCC to act to bring more affordable choices to business customers without delay.

Sincerely,

Nicholle Britl

Dear Chairman Wheeler and the FCC,

I work in the broadband industry, and I am writing to urge you to support policies that encourage more broadband competition today and in the future. Broadband competition is the key to unleashing innovation and investment.

Competition means business. Customers large and small rely on competitive network providers for better service, innovation and affordability. From start-ups to nationwide retail chains, to schools and libraries, and hospitals and government buildings, customers depend on competition and choice.

According to the FCC's own business data services proceeding, the vast majority of business locations have only one option, and less than one percent have a choice of more than two. That's not really a choice at all, and the Commission must address this broken market.

A vote for business data services reform is a vote for competition and consumers. Promoting competition is the fastest way to speed the technology transitions and deployment of next generation broadband networks that are essential to growing our economy and creating jobs. I encourage the FCC to act to bring more affordable choices to business customers without delay.

Sincerely,

Mark Rubin

Dear Chairman Wheeler and the FCC:

I work in the broadband industry, and I am writing to urge you to support policies that encourage more broadband competition today and in the future. Broadband competition is the key to unleashing innovation and investment.

Competition means business. Customers large and small rely on competitive network providers for better service, innovation and affordability. From start-ups to nationwide retail chains, to schools and libraries, and hospitals and government buildings, customers depend on competition and choice.

According to the FCC's own business data services proceeding, the vast majority of business locations have only one option, and only two percent of locations have a choice of more than two providers. That's not really a choice at all, and the Commission must address this broken market.

A vote for business data services reform is a vote for competition and consumers. Promoting competition is the fastest way to speed the technology transitions and deployment of next generation broadband networks that are essential to growing our economy and creating jobs. I encourage the FCC to act to bring more affordable choices to business customers without delay.

Sincerely,
